

Recognizing Medicare Opioid Prescriber Patterns to Provide Initial Indicator of Potential Abuse

Randy Grant (DSML)

Introduction

Issue: The client, AcmeMedicareScripts, needs a way to be able to identify any trends in opiate prescriptions with existing Medicare Part D prescriber data

Solution: With sample data created from the 2019 Medicare Part D prescriber population data prescriber information:

- trends without a machine learning model can be visualized
- data can be added to the existing dataset

Goal: Recognize trends of how opioids are prescribed, a deviation from the median could be identified that will assist in preventing potential overdoses or abuse across Medicare patients

Methods

Data Used

- [Kaggle.com sample datasets](#)
- [Medicare Part D Prescribers - by Provider and Drug](#)
- [State Abbreviations](#)
- Tools Used:
 - Excel for data exploration
 - Tableau Prep Builder for data transformations
 - Tableau Public for visualizations
- Metrics Created:
 - Sample of Medicare Part D Prescribers: Opioid Prescription Volume Percentage Comparison Across the U.S. for 2019 with Death Percentage Comparison
 - Sample of Medicare Part D Prescribers: Opioid Prescription Count By Drug Name and Specialty for 2019
 - Sample of Medicare Part D Prescribers: Geographic Spread of Specific Opioid Prescriptions by State and Medical Specialty for 2019
 - Sample of Medicare Part D Prescribers: Top Opioid Prescribers Split by Drug Name for 2019

Data Dictionary

- NPI – unique National Provider Identifier number
- Gender - (M/F)
- State - U.S. State by abbreviation
- Credentials - set of initials indicative of medical degree
- Specialty - description of type of medicinal practice
- Total number of prescriptions written for the year by the NPI by Drug name
- Opioid.Prescriber - boolean value (0 or 1) indicating whether or not that NPI prescribed opiate drugs more than 10 times in the year
